

Sampark quick start

Copy emails and phone numbers from any page · sampark.stroban.app

Every email and phone number on a page, in eight steps

Paste a page, drop in a PDF, or click the one-click bookmarklet. Sampark finds the contacts, puts names next to them, cleans them up and copies them in one click. Everything happens on your device: nothing you scan is sent anywhere.

Lite

Free

- Find and copy every email and phone number, with names
- The bookmarklet, PDFs and files, hidden emails decoded

Pro

₹149 · pay once

- A collection across many pages; CSV, vCard and table export
- History of your last 25 scans; bookmarklet into the collection

| 3. Add the bookmarklet on a laptop | 7. Activate Pro |
| 4. Use the bookmarklet on any page | 8. Collect from many pages Pro |
| | Good to know and help |

1 Paste a page

1. Open the web page that has the contacts, for example a college's **Faculty**, **Contact** or **Directory** page. These usually list far more people than a home page.
2. Select everything on it and copy: `Ctrl + A`, then `Ctrl + C` (on a Mac, `Cmd + A` and `Cmd + C`).
3. Open sampark.stroban.app, click in the big box and paste (`Ctrl + V`), or tap **Paste**.
4. Optional: type where it came from in **Where is this from?**, for example "Sample Institute faculty page". It labels the scan and, with Pro, every contact you collect.
5. Tap **Find contacts**.

Find every email and phone number on a page

Paste the page text or HTML, or drop in a PDF or text file. Sampark finds contacts, cleans them up and lets you copy them in one click. Nothing leaves your device.

Faculty Directory

Sample Institute of Management · School of Business

Dr. Priya Rao

Professor, Marketing

 Find contacts

Paste

Open file

Try a sample

Clear

Sample Institute faculty page

The copied page goes in the box; the source label is optional.

Paste the page, not its address. Sampark reads the text you give it and never visits websites itself. If you paste only a web address, it shows you how to scan that page instead. Want to try first? Tap **Try a sample**.

2 Check and copy the results

Sampark lists the **emails** and **phone numbers** it found, with the person's name and role underneath when the page shows them. Repeats are removed and numbers are written the same way.

- **Tags** explain a result: **ROLE** is a shared address such as admissions@, **DECODED** is an email that was written as "name [at] site [dot] com", and **LANDLINE** or **TOLL-FREE** marks numbers that are not mobiles.
- **Narrow the list** with **Filter results...**, the domain menu, **Hide info@ / no-reply** and **Mobiles only**.
- **Copy** everything with **Copy all**, or use the buttons on each row: copy, email, WhatsApp or call.

+ Copy as table
+ Download CSV
+ Save as contacts (vCard)
+ Add all to collection

Names and roles come from the page. The amber lock buttons are Pro features.

Copying for Outlook or a spreadsheet? In ⚙ **Settings**, choose the **Separator for "Copy all"** (new line, comma, or semicolon for Outlook) and the **Phone format when copying**.

3 Add the bookmarklet on a laptop

The bookmarklet is a bookmark that runs Sampark on the page you are looking at, so you don't need to copy and paste. You set it up once in your laptop's browser.

1. Show your browser's bookmarks bar: **Ctrl + Shift + B** on Windows, **Cmd + Shift + B** on a Mac.
2. In Sampark, scroll down to ⚡ **One-click bookmarklet**.
3. Drag the purple ⚡ **Sampark** button up onto the bookmarks bar and let go. A new bookmark called "⚡ Sampark" appears there.

⚡ One-click bookmarklet

Grab contacts from the page you are on, without copying or pasting. It runs only when you click it, only on that page, and nothing is sent anywhere.

← drag this to your bookmarks bar

1. Show the bookmarks bar: `Ctrl + Shift + B` (Windows) or `Cmd + Shift + B` (Mac).
2. Drag the ⚡ **Sampark** button onto the bar.
3. On any page, click it. A panel lists the contacts with copy buttons. If you select some text first, it scans just that part.

► On a phone, or can't drag?

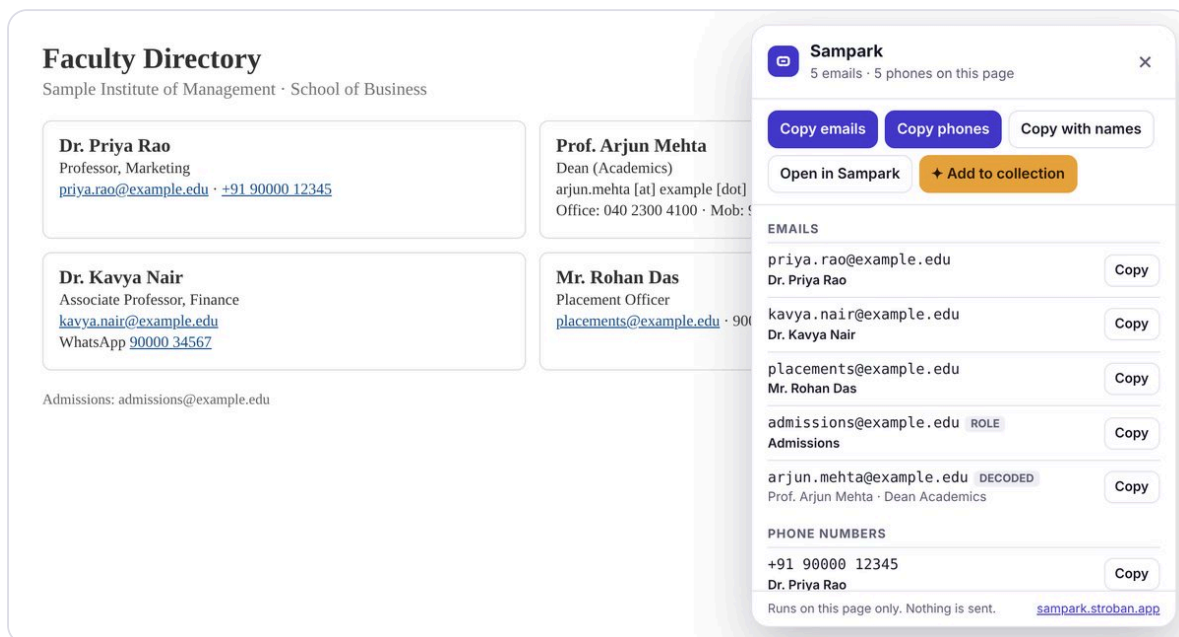

Stuck? [See each step with pictures in the quick-start guide ↗](#)

Drag the purple button, don't click it.

Can't drag? Open **On a phone, or can't drag?** on the same card, tap **Copy bookmarklet code**, and follow step 5 below. It works the same way on a laptop.

4 Use the bookmarklet on any page

1. Go to the page with the contacts and click ⚡ **Sampark** on your bookmarks bar.
2. A small Sampark panel opens on the right of that page, listing the emails and phone numbers with names.
3. Use **Copy emails**, **Copy phones** or **Copy with names**, or **Copy** on a single row.
4. **Open in Sampark** opens the results in the app, with the filters and exports. With Pro, ⚡ **Add to collection** adds them straight to your collection (step 8).
5. Close the panel with **×**, `Esc`, or by clicking the bookmark again.

The screenshot shows a 'Faculty Directory' page for 'Sample Institute of Management · School of Business'. It lists four faculty members: Dr. Priya Rao, Prof. Arjun Mehta, Dr. Kavya Nair, and Mr. Rohan Das. The Sampark panel is open on the right, displaying a list of emails and phone numbers extracted from the page. The panel includes buttons for 'Copy emails', 'Copy phones', 'Copy with names', 'Open in Sampark', and '+ Add to collection'. The extracted data is organized into 'EMAILS' and 'PHONE NUMBERS' sections, with each entry having a 'Copy' button. The panel also shows a status message: 'Runs on this page only. Nothing is sent.' and a link to 'sampark.stroban.app'.

EMAILS	PHONE NUMBERS
priya.rao@example.edu Dr. Priya Rao	+91 90000 12345 Dr. Priya Rao
kavya.nair@example.edu Dr. Kavya Nair	
placements@example.edu Mr. Rohan Das	
admissions@example.edu Admissions	
arjun.mehta@example.edu Prof. Arjun Mehta · Dean Academics	

The panel runs only on the page you are on, only when you click it. Nothing is sent.

Only part of a page? Select that part with the mouse first, then click the bookmark: Sampark scans just the selection. If a site hides numbers behind a "Show number" button, click that button first.

5 On a phone

Copy and paste (any phone). On the page, long-press a word, tap **Select all**, then **Copy**. Open Sampark, tap **Paste**, then **Find contacts**.

Share to Sampark (Android, once Sampark is installed). Select the text, tap **Share** and choose **Sampark**. It opens with the text and finds the contacts.

The bookmarklet in Chrome on Android:

1. In Sampark, open **On a phone, or can't drag?** under the bookmarklet and tap **Copy bookmarklet code**.
2. Bookmark any page (★ in Chrome's ⋮ menu). Then open ⋮ → **Bookmarks**, find the new bookmark, tap its ⋮ and **Edit**.
3. Change its name to **Sampark**, delete everything in the address (URL) box, paste the copied code there, and save.
4. On any page, tap the address bar, type **Sampark** and tap the bookmark that appears (the one with the star). The panel opens on that page.

⚡ One-click bookmarklet

Grab contacts from the page you are on, without copying or pasting. It runs only when you click it, only on that page, and nothing is sent anywhere.

⚡ **Sampark**

← drag this to your bookmarks bar

1. Show the bookmarks bar: **Ctrl + Shift + B** (Windows) or **Cmd + Shift + B** (Mac).
2. Drag the ⚡ **Sampark** button onto the bar.
3. On any page, click it. A panel lists the contacts with copy buttons. If you select some text first, it scans just that part.

▼ On a phone, or can't drag?

1. **Copy bookmarklet code**
2. Bookmark any page (for example this one), then edit that bookmark: name it **Sampark** and replace its URL with the copied code.
3. On a page, tap the address bar, type **Sampark** and pick the bookmark. Chrome on Android runs it from there.

Stuck? [See each step with pictures in the quick-start guide ↗](#)

The phone steps are also on the bookmarklet card.

Picking the bookmark matters. In step 4, tap the bookmark itself, not a search suggestion. If nothing happens, check the bookmark's address starts with `javascript: .` On an iPhone, copy and paste is the simplest way.

6 PDFs and other files

1. Tap **Open file**, or drag files onto the big box. You can choose several at once.
2. Sampark reads PDFs, web pages saved as HTML, text, CSV and vCard files, saved emails (.eml) and exported chats.
3. The contacts appear as in step 2, ready to copy.

Brochures, conference programmes and staff directories work well. A PDF that is only a scanned picture of a page has no text inside, so Sampark can't read it.

7 Activate Pro

Buy Pro from ⚡ **Get Pro** or **Buy Pro · ₹149 on WhatsApp**. Your key arrives by email from **hello@stroban.app** (check spam the first time). It looks like `SMP-XXXX-XXXX-XXXX-XXXX`.

1. Open `sampark.stroban.app` and tap ⚙ **Settings** at the top right.
2. Under **Sampark Pro**, paste the key into the box and tap **Activate**.
3. The badge at the top changes from **Lite** to **Pro**, and Settings says "Pro is active on this device".

Sampark Pro Lite

Adds the collection, CSV/vCard export and history. ₹149 one-time.

Buy Pro - ₹149 on WhatsApp

SMP-7KQ2-M4XD-9PRT-3VNA

Activate

Sampark Pro Active

Pro is active on this device. Thank you for supporting Sampark!

Key: SMP-7KQ2-M4XD-9PRT-3VNA

Deactivate on this device

Turns Pro off here, for example before you pass this device on. Your key stays valid, so you can activate it again on this or another device.

Before and after activating.

Pro is unlocked on that device. To use it on another phone or computer, paste the same key there.

8 Collect from many pages Pro

The **collection** gathers contacts from many pages into one list without repeats, each labelled with where it came from.

1. After a scan, tap + on the rows you want, or **Add all to collection** under the results. From the bookmarklet, use + **Add to collection**.
2. Scan the next page and add again. The **Collection** card shows everything you have gathered.
3. Export the whole collection: **Copy emails**, **Copy phones**, **Copy as table** (paste into Excel or Google Sheets), **CSV**, or **vCard** to save them to your phone's contacts.

Collection 6

Clear

Gather contacts from many pages into one de-duplicated list, then copy or export them together.

priya.rao@example.edu Dr. Priya Rao · Professor, Marketing · Sample Institute faculty page	📄 ✉ ×
sneha.kulkarni@example.org Ms. Sneha Kulkarni · Head, Training and Placement · Sample College contact page	📄 ✉ ×

Copy emails (3) Copy phones (3) Copy as table CSV vCard

Two pages in one list; × removes a contact.

The same exports work on a single scan: **Copy as table**, **Download CSV** and **Save as contacts (vCard)** under the results. **Recent scans** keeps your last 25 scans on this device; tap **Open** to see one again.

Recent scans		Clear
Sample College contact page	Oct 28, 01:42 PM · 2 emails, 2 phones	Open
Sample Institute faculty page	Oct 28, 01:42 PM · 5 emails, 5 phones	Open

Good to know and help

- **Private by design.** Everything you paste, open or scan stays on your device. Only two things ever reach our server: your licence key when you activate it, and a feedback message if you send one.
- **Use contacts fairly.** Contact people only in ways they would expect, and respect DND (Do Not Disturb) rules and privacy laws.
- **Shared computer?** Before you leave it, use  **Settings** → **Deactivate on this device**. Your key stays valid for your own devices.
- **Install it.**  **Settings** → **Install Sampark** adds it to your home screen or dock, and it works offline. On an iPhone: Share → Add to Home Screen.
